History Autodesk was founded by two young artists from Stanford University, Ivan Sutherland and Gary Wiegert. When they left to form a computer graphics consulting company, the company acquired the assets of a proprietary computer graphic system known as the "Nucolor". Autodesk's first product was a desktop CAD system, now known as AutoCAD, which was introduced in December 1982. They released the first commercial version of the application on the Apple II+ as an application program, and a later version, AutoCAD 1982, was available for MS-DOS. In 1986, Autodesk released a massively modified version of AutoCAD called AutoCAD R14.5.2, which is widely considered to be the first commercial version of the program. In the early 1990s, AutoCAD was ported to the Macintosh, and further porting began in 1998 and 1999 for Windows and UNIX platforms. AutoCAD R14.5.2 became known as AutoCAD 2000. On December 1, 1997, Autodesk officially changed the company's name to Autodesk. AutoCAD X11 was the first commercial version of AutoCAD to support the X11 windowing system. On April 1, 2014, Autodesk announced that after 49 years of business and 10 years of continuous innovation, Autodesk has launched Autodesk 360, a cloud-based platform to deliver next-generation product creation. Product timeline Key dates and releases 1982 Autodesk releases AutoCAD, an application which runs on the Apple II+ with a standard Apple II monitor and input devices. 1986 Autodesk releases the massively modified version of AutoCAD called AutoCAD R14.5.2. The R version number indicates it is a revision of AutoCAD. AutoCAD R14.5.2 is the first AutoCAD to have a 32-bit architecture. It is also the first AutoCAD to support a 64-bit CPU architecture. 1989 Autodesk releases AutoCAD R12 for the Macintosh platform. 1990 Autodesk releases AutoCAD R11 for the Macintosh platform. 1991 Autodesk releases AutoCAD R10 for the Macintosh platform. 1992 Autodesk releases AutoCAD R8 for the Macintosh platform. 1994 Aut

It was first played in 1895 at the Chicago Golf Club in Wheaton, Illinois, where it remained for the next sixty years, then moved to Oakland Hills Country Club in 1936. The tournament became known as the U.S. Open from 1972 to 1993 and again since 1995. The tournament is the second-oldest of the four majors, and is the last of the four to be played in the United States. From 1938 to 1971, the tournament was played at the same site for two consecutive years, and from 1972 to 1993 for three consecutive years. The current tournament host is the Quail Hollow Club in Charlotte, North Carolina. In the past, the course at the United States Open has been ranked the best public course in the United States by Golf Magazine. In 2018, the golf course at the tournament was ranked the best public course in the United States by Golf Magazine. The USGA previously conducted a tournament in Mexico called the U.S. Open Golf Championship from 1935 to 1962. That tournament was first played in 1935 at the Royal Canadian Golf Club in Mexico City, and was founded with a prize of US\$10,000. History The first edition of the U.S. Open took place at the Chicago Golf Club in Wheaton, Illinois. It was the only golf tournament to be conducted in the United States from its foundation until the PGA Championship in 1916, but since the inception of the modern Open era in 1920, the U.S. Open has held the status of being the oldest of the four men's major championships. The USGA has been in charge of the tournament since 1902. The event is held at the U.S. Open Golf Club in Charlotte, North Carolina, unless the Championship is scheduled for two consecutive

## What's New In?

How did we do it? Under the hood, we significantly rewrote AutoCAD's markup engine, and rewrote its feedback loop – a radical new feature that automates the process of incorporating user feedback into your design. We also improved the experience of sending feedback from a variety of user-friendly and reliable sources. As a result, the experience of writing and sending feedback has never been better. Real-Time View of Markup Assist: Stay informed of feedback while you work in your drawing. The Real-Time view shows you the feedback and communicates the status of markup changes in real-time. How did we do it? When you send feedback, you can now choose to see the state of changes in the drawing as they occur – so you can see feedback in the context of your drawing as it's being created. This is an important step towards eliminating the “filter bubble” and keeping you in the loop throughout the feedback process. In addition, the new version of AutoCAD features a new data flow to communicate feedback and status in real-time. This means your design team is more informed about the feedback received and the status of your design. It's All Integrated: Master the markup tools you use every day. Our designers have meticulously worked with our engineers and other teams to integrate their feedback into your AutoCAD applications. How did we do it? The markup engine is now a first-class citizen within AutoCAD. Designers can use the entire range of markup tools and see their results in their current application. This includes data editing, text, import and export, scripting and markup-guided changes to your model. Real-Time 2D View: Work from anywhere with real-time collaboration. From anywhere, our designers can view your drawing in real-time while editing your design. They can view and edit 2D drawings, freehand drawing, 3D visualization and your 3D models directly in the real-time view of the 2D drawing window. How did we do it? The new drawing window features a new real-time 2D view for our designers to collaboratively work with your drawing. Our engineers created this first-class real-time experience, building on an industry-leading AutoCAD 2D drawing technology that has been a standard for the industry for over two decades.
